# THE MIRACLE OF THE UNIVERSE

Alper Yıldız

## About the Author

Alper Yıldız was born in Tarsus in 1969 and is originally from Adana. He lost his mother at a young age and was adopted as a child worker at the age of ten, and grew up doing many jobs under difficult conditions. He wrote candidly about his life experiences while living his life in difficulties, for the benefit of other people. He carries out selfless work to inform and benefit our people with the facts he deals with great courage against the hesitant actions of people in life. He completed his education in Adana, is the father of two children and continues his life by working in a private sector.

# Preface

We thought the world was about to end. We were now experiencing the most severe natural events on our planet, such as earthquakes, floods and landslides. Just when we thought it was over, the end of the world had come, a miracle happened: God's angels had landed on our planet, but we could not see it because of a violent explosion of light. God conveyed to us the message He wanted to give by sending the Ark of the Covenant to our planet.

The Ark of the Covenant, which was found on our planet in 22 when history was recorded for the first time, by aliens who came from far away, thanks to the transmitter stations they established in order to communicate with us, to convey the many natural events they experienced on their own planet, and to find the Ark of the Covenant, which many scientists and religious researchers were looking for. Their planet has undergone a great change...

## SOLAR SYSTEM AND PLANETS

The universe and our planet...

The question that crosses everyone's mind: Are we alone in the universe or not? Since its existence, humankind has looked at the sky, the stars, the sun, the moon, the satellite of our world, and the morning star, and thought: Are we alone in the universe or not? I was very curious about this, like everyone else; Were we alone in the universe or not?

The distance of the planets from the sun determines the length of their year. Our planet completes one revolution around the Sun in 365 days and six hours, and each tour is called a year. For Mercury, the closest planet to the Sun, this period is eighty-eight Earth days. That is, if we lived on Mercury, we would have lived a year in eighty-eight days. On Neptune, the farthest planet from the Sun, this period is approximately 165 years, and if we lived on Neptune, we would all die before reaching the age of one. So, are we alone in the universe? While we discover new lives and new species every day, even on our own planet, it would not be a dream to think of life on other planets. Although no scientist or spaceport has yet found whether there is life on a planet other than Earth, there may be another planet at the same distance from us, but why might we not notice this planet? On a dark night, when a

car is approaching you with its high beams on, can you see the firefly behind the car? It will not be possible to see the firefly as the headlights of the car will dazzle your eyes. When we think about this scientific phenomenon, the existence of another planet that is the same distance from the sun as our earth is scientifically possible, but it is not possible to see this planet except through a satellite sent outside the solar system. Gravity is the Saniye factor that affects all living things on the planet. The third factor that will affect the life of living things is the atmosphere. For example, it is known that dinosaurs became extinct as a result of a meteorite hitting the Earth sixty-five million years ago, but dinosaurs did not become extinct because of this, but rather due to lack of oxygen as a result of the gas and dust cloud covering the entire atmosphere.

## THE BIRTH OF UMUT AND SANIYE

Date 21.06.1995

Mr. Ahmet and Ms. Ayşe, residents of Belpınar village in Geyve district of Sakarya, have been married for only one year and Ms. Ayşe is pregnant. At 22.30 on June 21, Ms. Ayşe goes into labor and it is time to give birth. Since the village is far from the hospital, the village elders are also ready to help Ayşe Hanım give birth. Birth begins and their first baby, a boy, was born at 23.59, and then their Saniye baby, a girl, was born at 00.05. Although the children were born a few minutes apart, one day passed between them and their zodiac signs were different. The first born child was born on June 21, the last day of the zodiac sign Gemini, and the other child was born on June 22, the beginning of the zodiac sign Cancer.

Even though Mr. Ahmet is not aware of it, the characteristics of the two zodiac signs are different from each other. The characteristic of Gemini is that they love researching and learning new information, they are full of energy and can't sit still. Cancer zodiac signs are known for their emotionality and sensitivity, and they expect the same sensitivity from everyone around them. They are cheerful, kind-hearted, helpful, thoughtful and understanding, but sometimes they can be sullen and touchy for no reason. Mr. Ahmet is very happy to have a daughter and a son. He starts thinking about the

names of the children at the same time as his wife. Mr. Ahmet makes a decision and tells his wife that this birth is a miracle and suggests that he name their daughter after his wife and their son after himself. Ms. Ayşe says that she wants to name her daughters 'Saniye'. Mr. Ahmet looks at Ms. Ayşe and asks why she wanted to give him such a name, and Ms. Ayşe says that her child was born in Saniyes and that's why she decided to name him Saniye. Mr. Ahmet also says that he thinks that his children are a Umut for them and that he wants to name their son 'Umut' and thus they decide on the names. The next day, Mr. Ahmet goes to town and wants to buy blankets for his newborn children. He buys a colorful blanket with flowers for his daughter Saniye. He buys a blanket for his son Umut, with pictures of planets, the moon, stars and the sun, and returns to his village.

Mr. Ahmet earns his living by farming. While only he and his wife had lived at home until now, they became four people with the birth of their children, and although the burden of living began to become heavy for him over time, he is aware of how valuable it is to live in happiness and peace with his family.

How quickly the days, months and years passed. Umut and Saniye are now five years old. While Mr. Ahmet goes to his field to work, he takes his wife Ayşe Hanım and their children Umut and Saniye with him. Children start playing at the edge of the field. Mr. Ahmet uses a push-button mobile phone. Umut: 'Dad, can you make me a mobile phone?' says. A very simple idea comes to Ahmet Bey's mind: He makes a kind of telephone by emptying two matchboxes and tying three meters

of thread. He explains to the children how sound spreads and that they can hear each other's voices when they talk in a low voice. Ahmet Bey also learned this when he was a child. Umut looks into the matchbox and says, 'How will Saniye hear my voice?' The sound was heard from the matchbox in Saniye's ear. Saniyes: 'I heard you.' She shouts with joy and at that moment her father says, 'Daughter, you will speak in a low voice, then she can still hear you.' He says that they should keep the rope tight.

Ahmet Bey's field is next to the Karaçay River in the Geyve district of Sakarya. Mr. Ahmet and Ms. Ayşe worked hard in the field and were tired. The sun is about to set. Mr. Ahmet calls his wife about to return home, 'Ayşe, let's go home now, that's enough for today, we are tired.' and Ms. Ayşe says yes, and calls out to the children, and they return home together. While the children were playing games at home in the evenings, they liked to talk to each other on the phone their father had made from a matchbox. While Mr. Ahmet is lying on his back on the sofa, a type of wooden armchair generally used in village houses, on the terrace of their house, sipping the fatigue tea brewed by Ms. Ayşe, they call his children Saniye and Umut to watch the sky. Children are at an age where they want to learn everything by asking questions, and they look at the sky and ask questions about what they see. Mr. Ahmet says that what his children see are stars. At that moment, a meteorite begins to fall from the sky, burning as it enters the earth's atmosphere, and they all see this and get excited. After the meteor slips and falls, scattering lights, Umut excitedly asks his father what it is, and his father says that it is a meteorite. Ms.

Ayşe tells her children that it is time to sleep and takes them to bed. Umut immediately falls asleep and in his dream he is on a star, holding a toy radio made from a matchbox made by his father. Saniye stands on another star. Umut talks to his sister until the morning with the walkie-talkie his father made from a matchbox. Umut is so caught up in the brightness of the stars and the glistening meteor that he dreams of wandering among the stars and meteors until the morning.

In the morning, Ms. Ayşe wakes up Umut and Saniye by stroking their hair, and they have breakfast as a family. Umut and Saniye play with their matchbox phones all day long.

The years pass thus.

## UMUT AND SANIYE'S SCHOOL EXCITEMENT

Umut is in the 5th grade of primary school. He has never forgotten the wireless phone his father made from a matchbox for him and his brother to play with when he was only 5 years old. He watches the stars every day and has now started to learn about the planets. One day, while you were in class, you asked your teacher a question: 'Teacher, is there another world like ours?' His teacher told Umut that scientists around the world have been doing research on this subject, but they have not yet found a world or planet where creatures like us live.

His teacher carefully watches Umut's excitement and desire to learn about the planets. Umut asks his teacher another question: 'Well, teacher, do they talk on the radio?' His teacher looks into Umut's eyes and tells him that there are some satellites being followed, but no active connection has been established yet. Umut says, 'I will make this happen one day, teacher,' and his teacher tells him that this wish is very good and that he should improve himself by reading and working a lot.

Another day, while Umut and his family were working in the field, it was evening and they set out to return home. Meanwhile, Umut tells his father that he wants to work somewhere and at the same time continue his education. His father, Ahmet Bey, responds positively to this and says that he will

We thought the world was about to end. We were now experiencing the most severe natural events on our planet, such as earthquakes, floods and landslides. Just when we thought it was over, the end of the world had come, a miracle happened: God's angels had landed on our planet, but we could not see them because of a violent explosion of light.
